Alsym Green is an inherently non-flammable, non-toxic, non-lithium battery chemistry. It uses a water-based electrolyte and is incapable of thermal runaway, making it the only option truly suitable for urban areas, home storage, data centers, and hazardous environments such as chemical plants, oil and gas facilities, and steel mills.

Batteries and similar devices accept, store, and release electricity on demand. Batteries use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.
