

# What does a whole house generator run on

How does a whole house generator work?

If there's a power outage, the generator will register this, and automatically supply an alternative source of electricity to power your home. The majority of whole house generators run on fuel, such as natural gas or liquid propane. This fuel powers an engine, which works with an alternator to generate electricity.

Do whole house generators really work?

Ideal for prolonged and unexpected outages, whole house generators do exactly what the name promises: power your entire home. Once installed, you won't need to worry about losing power, even for that must-have Florida appliance, the air conditioner!

What is a home generator?

A whole house generator, also known as a home generator, backup generator or a standby generator, essentially acts as a backup supply of electricity should the power go out. If there's a power outage, the generator will register this, and automatically supply an alternative source of electricity to power your home.

Can a whole home generator power my entire house?

A whole home generator can supply power to your entire house as long as it has a sufficient fuel supply. You can use propane, natural gas, gasoline (not for permanently-installed standby generators), or diesel fuel to run the generator.

What is a whole-house generator?

Unlike a portable or even a basic home standby generator, a whole-house generator can back up not only your essentials but even some nonessentials, making it feel like an outage never happened. Keep reading to learn everything you need to know about whole-house generators, their features and capabilities, and how to pick and size them.

Are whole house generators worth it?

Whole house generators are a wise investment for those looking for backup power during an outage. Although they are more expensive than portable generators, whole house generators have an extremely long lifespan and run time, especially ones that run on natural gas as fuel.

I will explain what size of generator you need to power one or the entirety of your home appliances. If you want a portable generator that can power a whole house, you're looking for at least a 10,000 watt generator or a likely more in the 15,000 watt portable generator range.

Portable generators don't produce enough energy to fuel your home the same way a whole-house option would. Due to the limitations of these generators, you'll have to run these generators very close to your home
