Some of the most common questions about wind power revolve around the role of energy storage in integrating wind power with the electric grid. The reality is that, while several small-scale energy storage demonstration projects have been conducted, the U.S. was able to add over 8,500 MW of wind power to the grid in 2008 without

The share of renewable energy technologies, particularly wind energy, in electricity generation, is significantly increasing [1]. According to the 2022 Global Wind Energy Council report, the global wind power capacity has witnessed remarkable growth in recent years, rising from 24 GW in 2001 to 837 GW in 2021.

Electric power companies can use this approach for greenfield sites or to replace retiring fossil power plants,
