Multiply Battery Modules. Multiple battery modules are composed of multiple batteries that work together to store and release energy. Battery Energy Storage Systems Application. BESS is used in a variety of applications, including: Peak Shaving. Peak shaving reduces the peak electricity demand by using stored energy to meet part of the demand.

How do battery energy storage systems work? Simply put, utility-scale battery storage systems work by storing energy in rechargeable batteries and releasing it into the grid at a later time to deliver electricity or other grid services. Without energy storage, electricity must be produced and consumed at exactly the same time.
